

Given a line segment, distances from a point on the perpendicular bisector to the each end point of the line segment are same.

선분의 수직 이등분선 상의 점으로 부터  
선분의 양 끝점 까지의 거리는 같다.

(Given a line segment, distances from a point on the perpendicular bisector to the each end point of the line segment are same.)

Given a line segment, distances from a point on the perpendicular bisector to the each end point of the line segment are same.

▶ Start

Given a line segment, distances from a point on the perpendicular bisector to the each end point of the line segment are same.

▶ Start

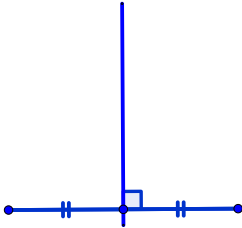

Given a line segment, distances from a point on the perpendicular bisector to the each end point of the line segment are same.
